

## Automated Method Development for SFC Chiral Separations

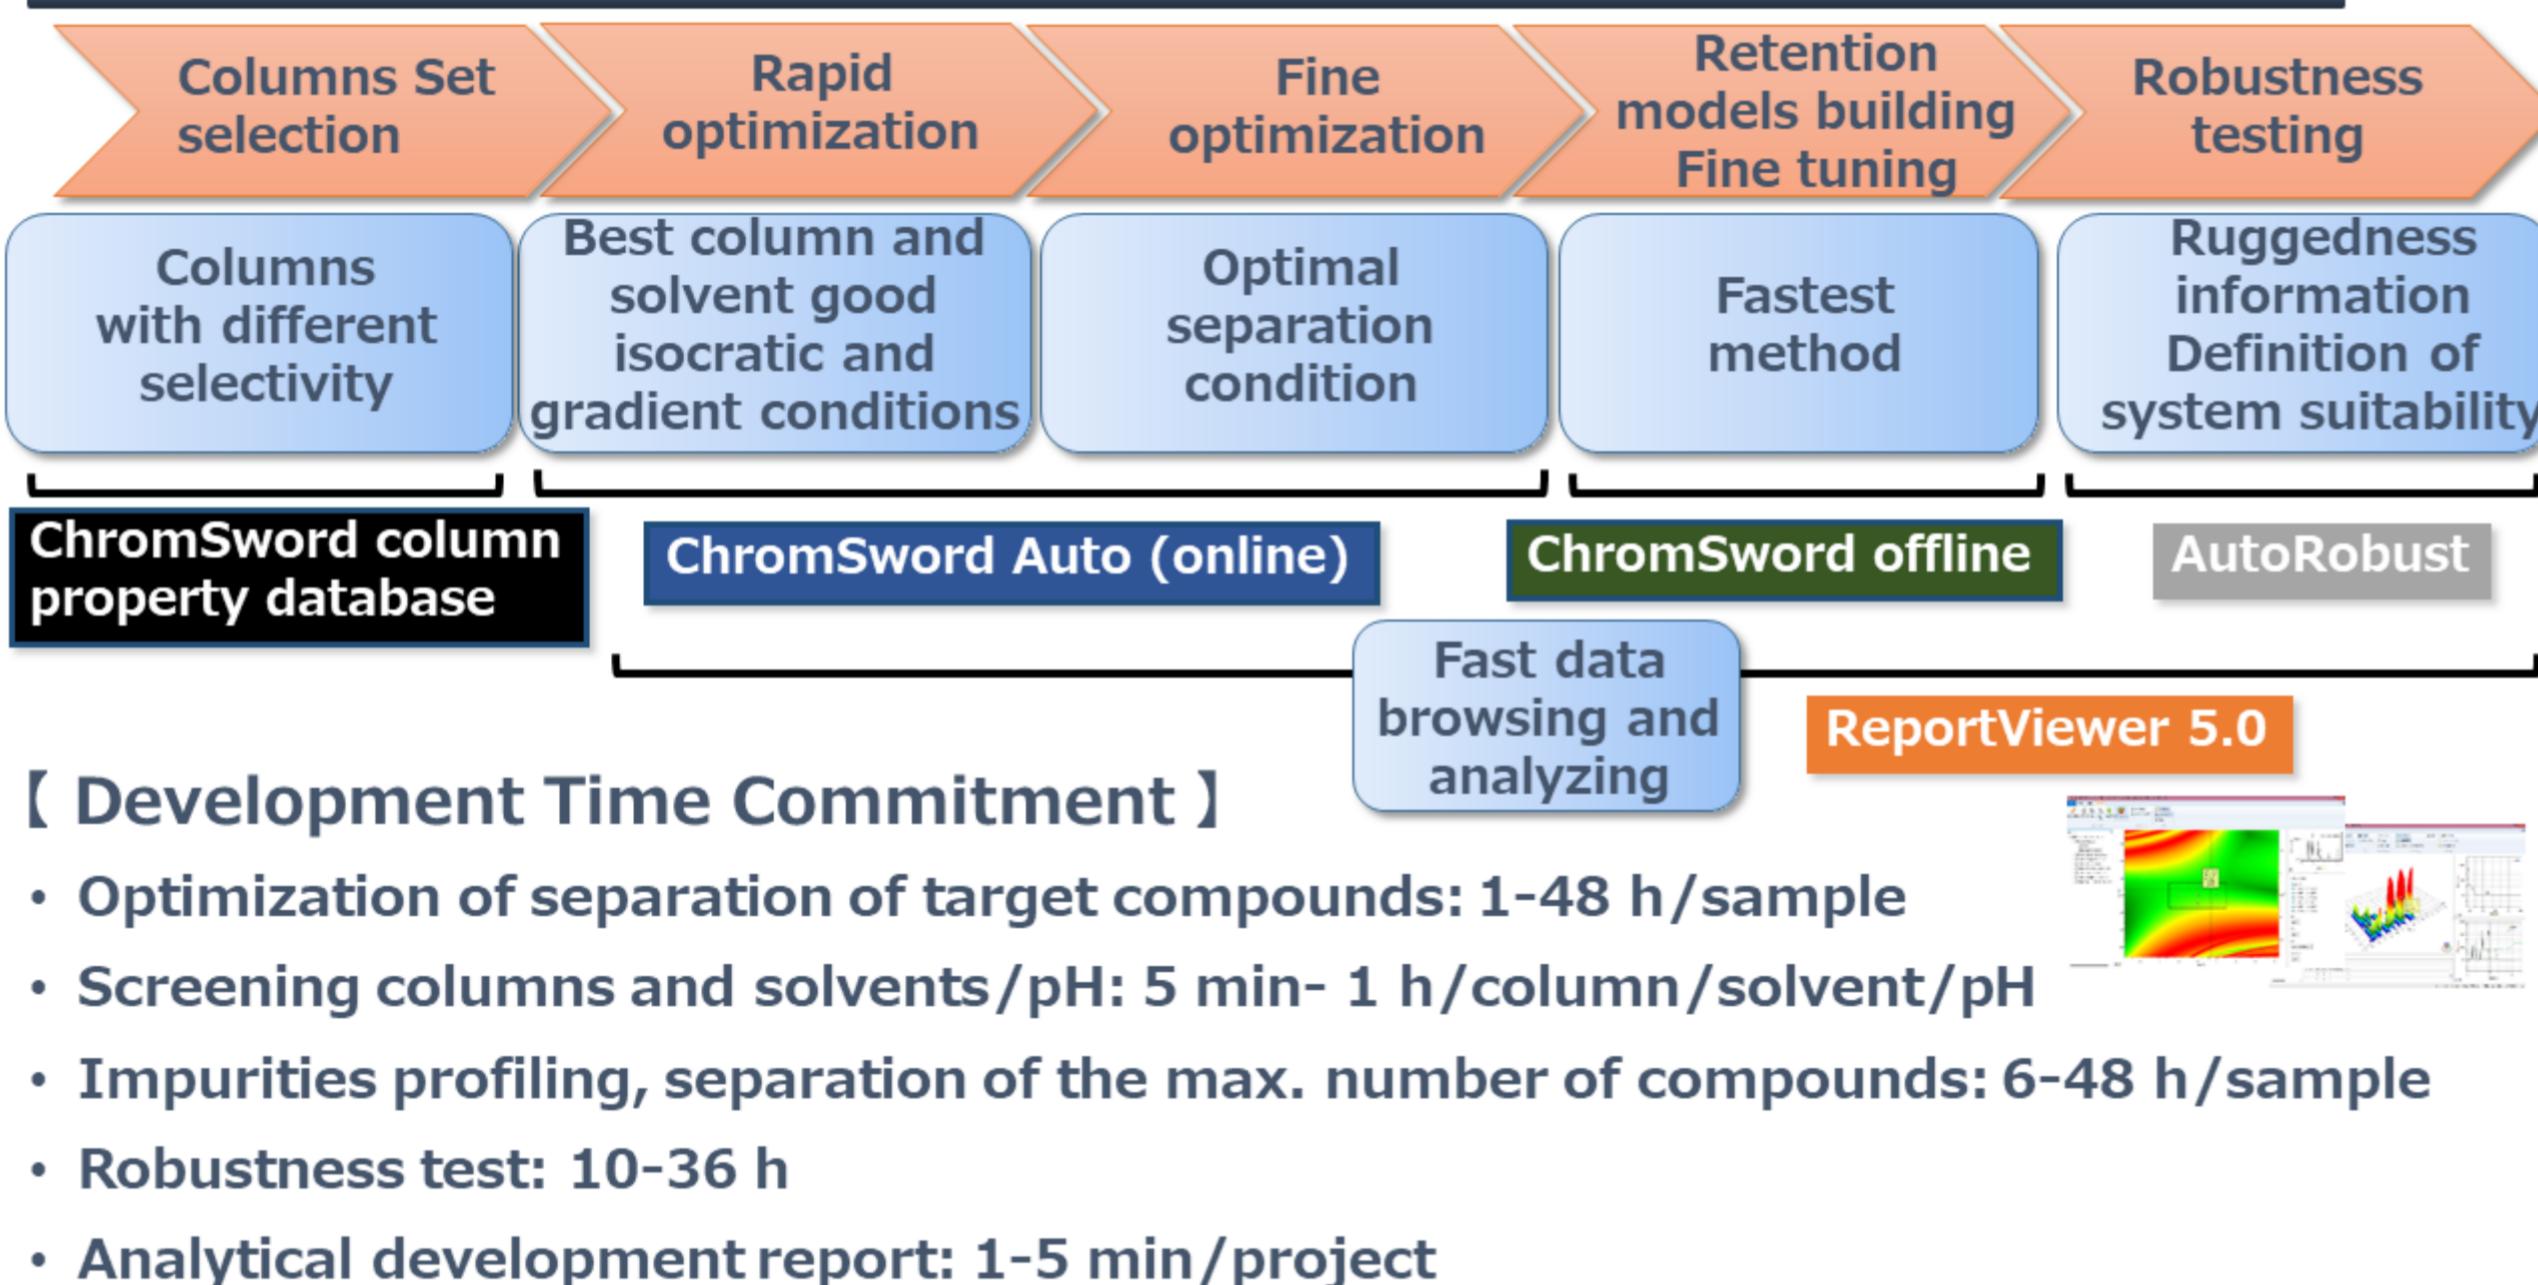

ChromSword Japan Co. Ltd. / info@chromsword.co.jp

**Summary**

- Racemic mixture of Omeprazol were used as application sample for the method development of SFC chiral separation.
- SFC instrument, column and solvent condition were Agilent 1260 series SFC /HPLC hybrid system with a switching valve and a multi-wavelength detector (MWD), 5 columns and 3 modifiers respectively.
- ChromSwordAuto® supports three modes of automated method development, screening, rapid optimization and fine optimization.
- The SFC various conditions were easily and quickly screened by ChromSwordAuto® to find out the best columns, solvents and buffer combinations for fine separation of each peak.

**Back Ground**

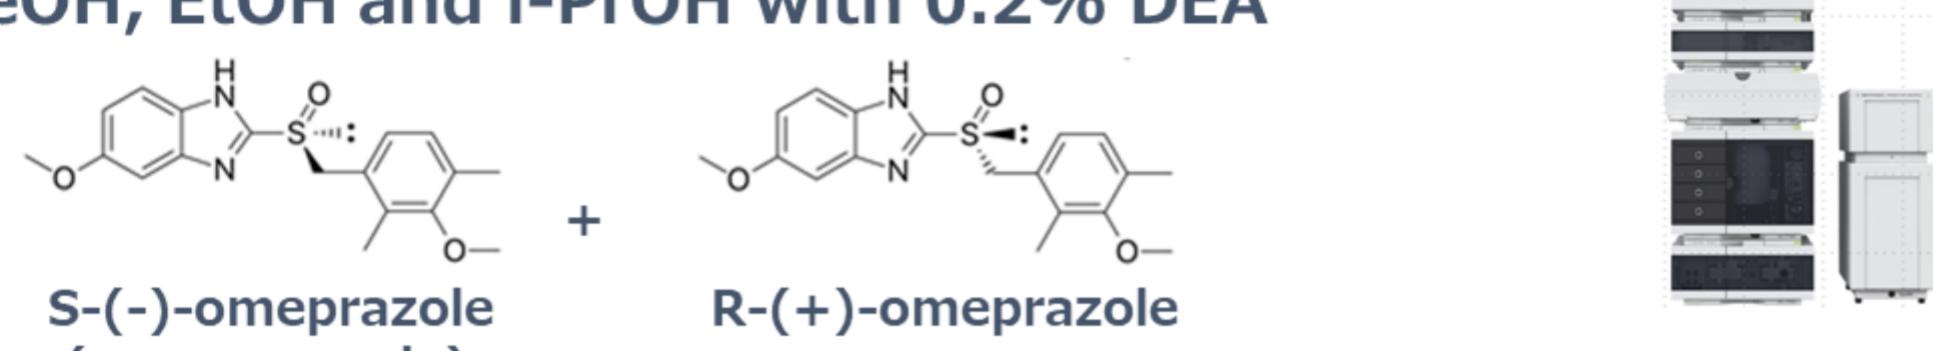

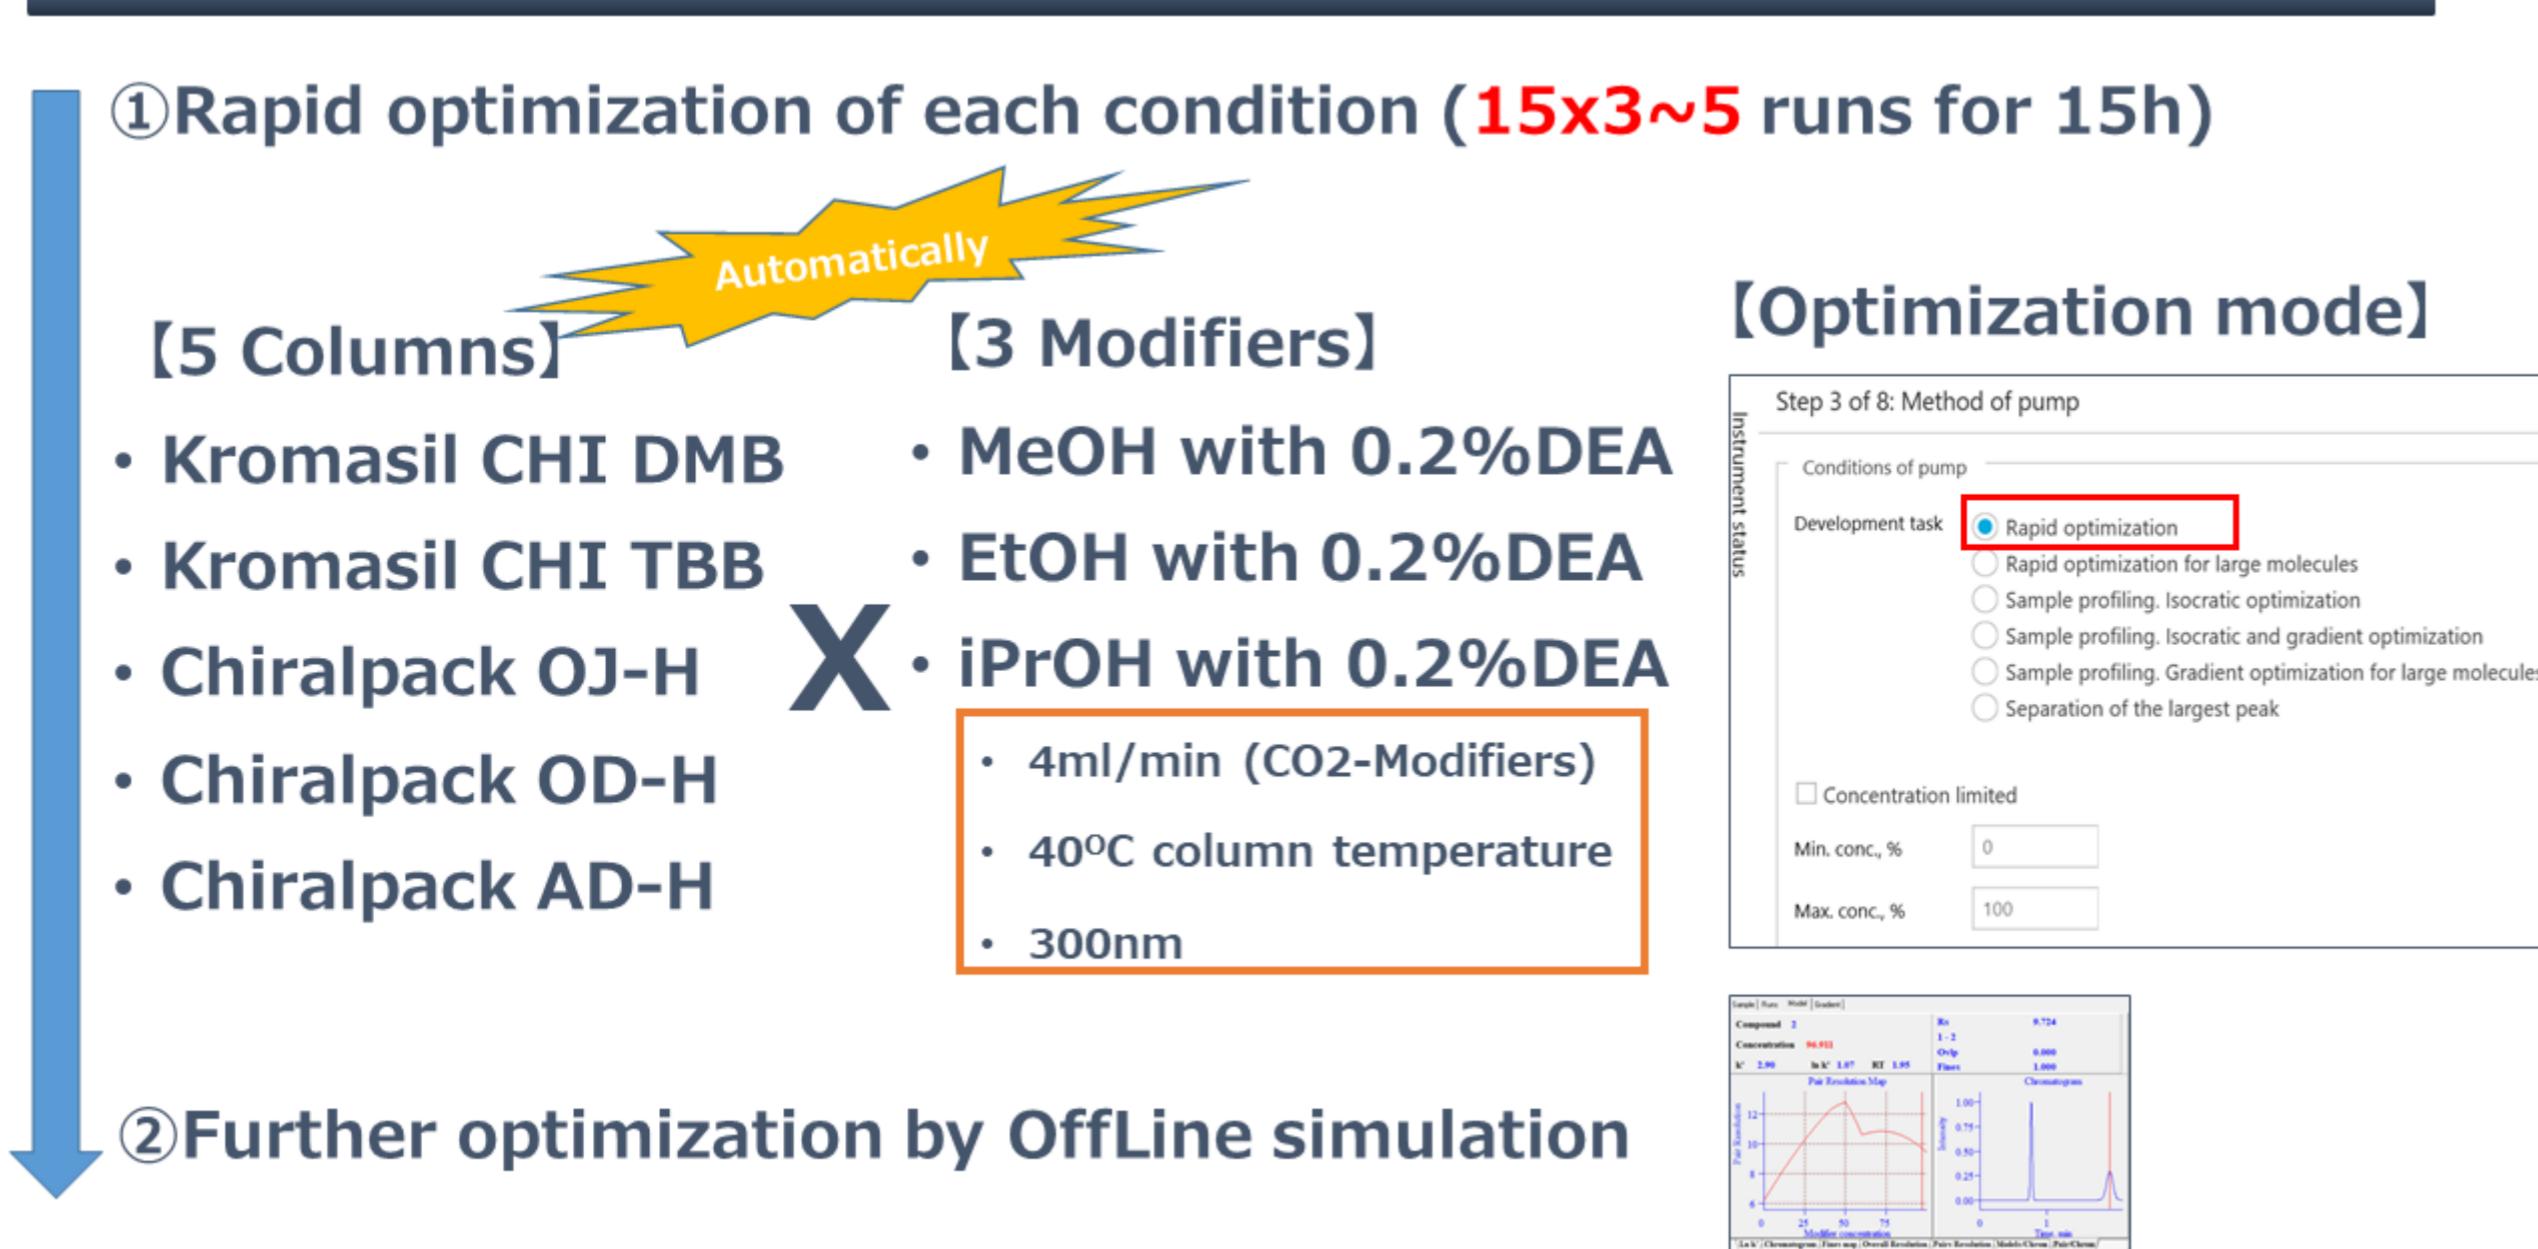

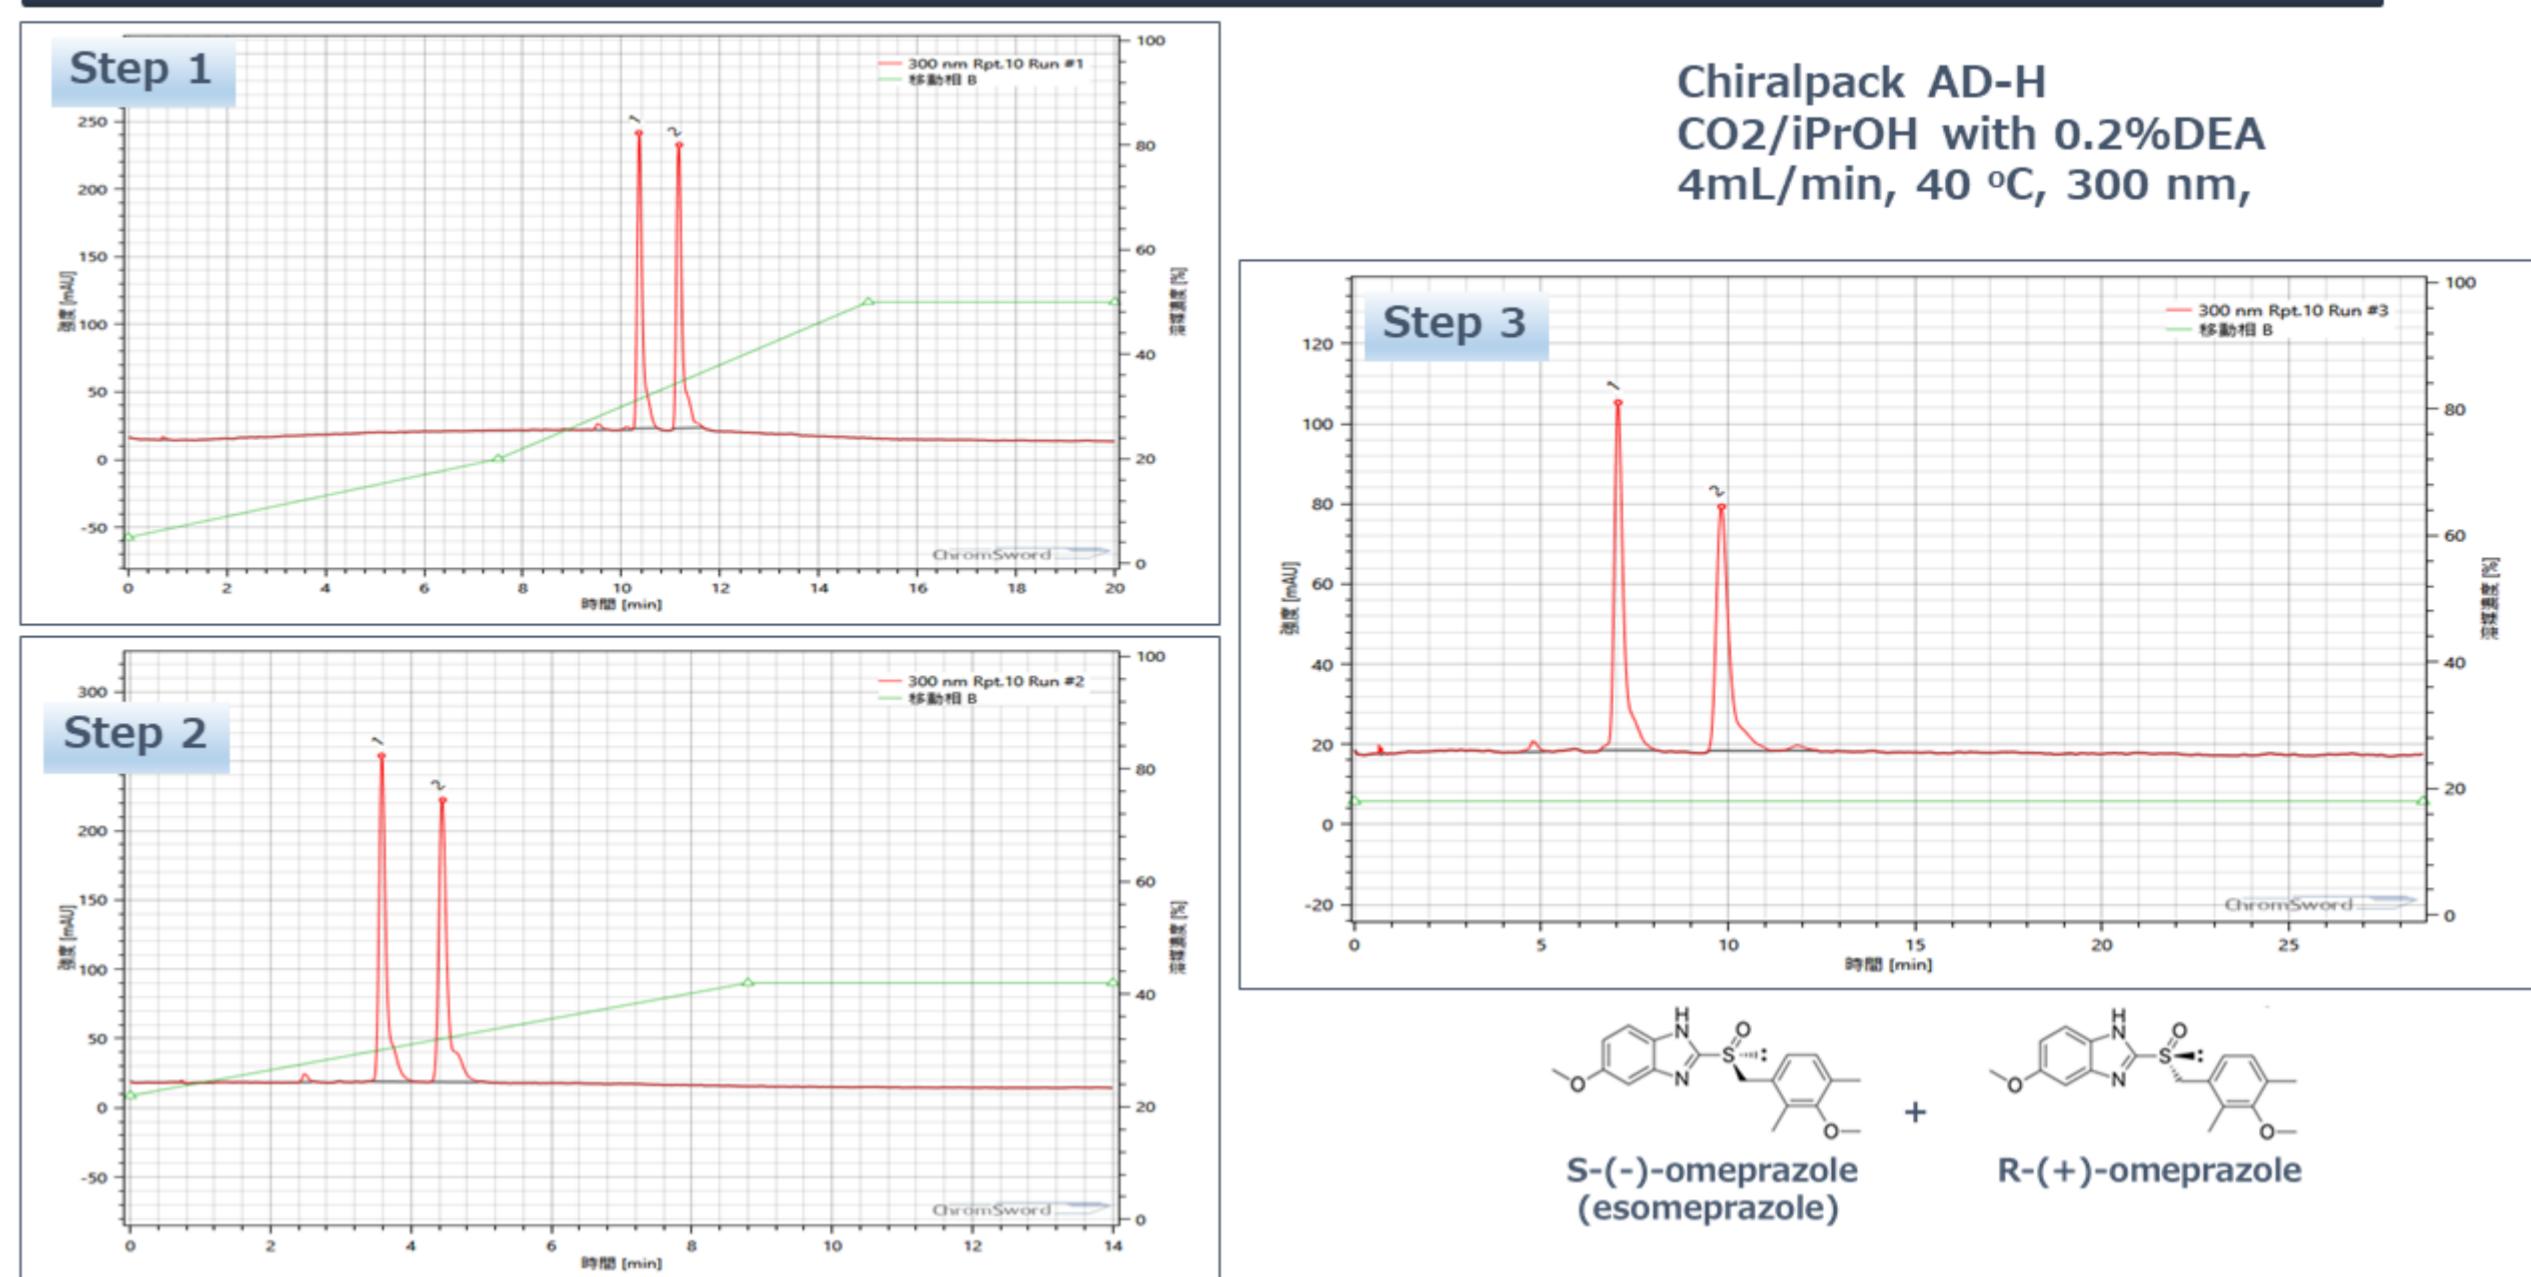

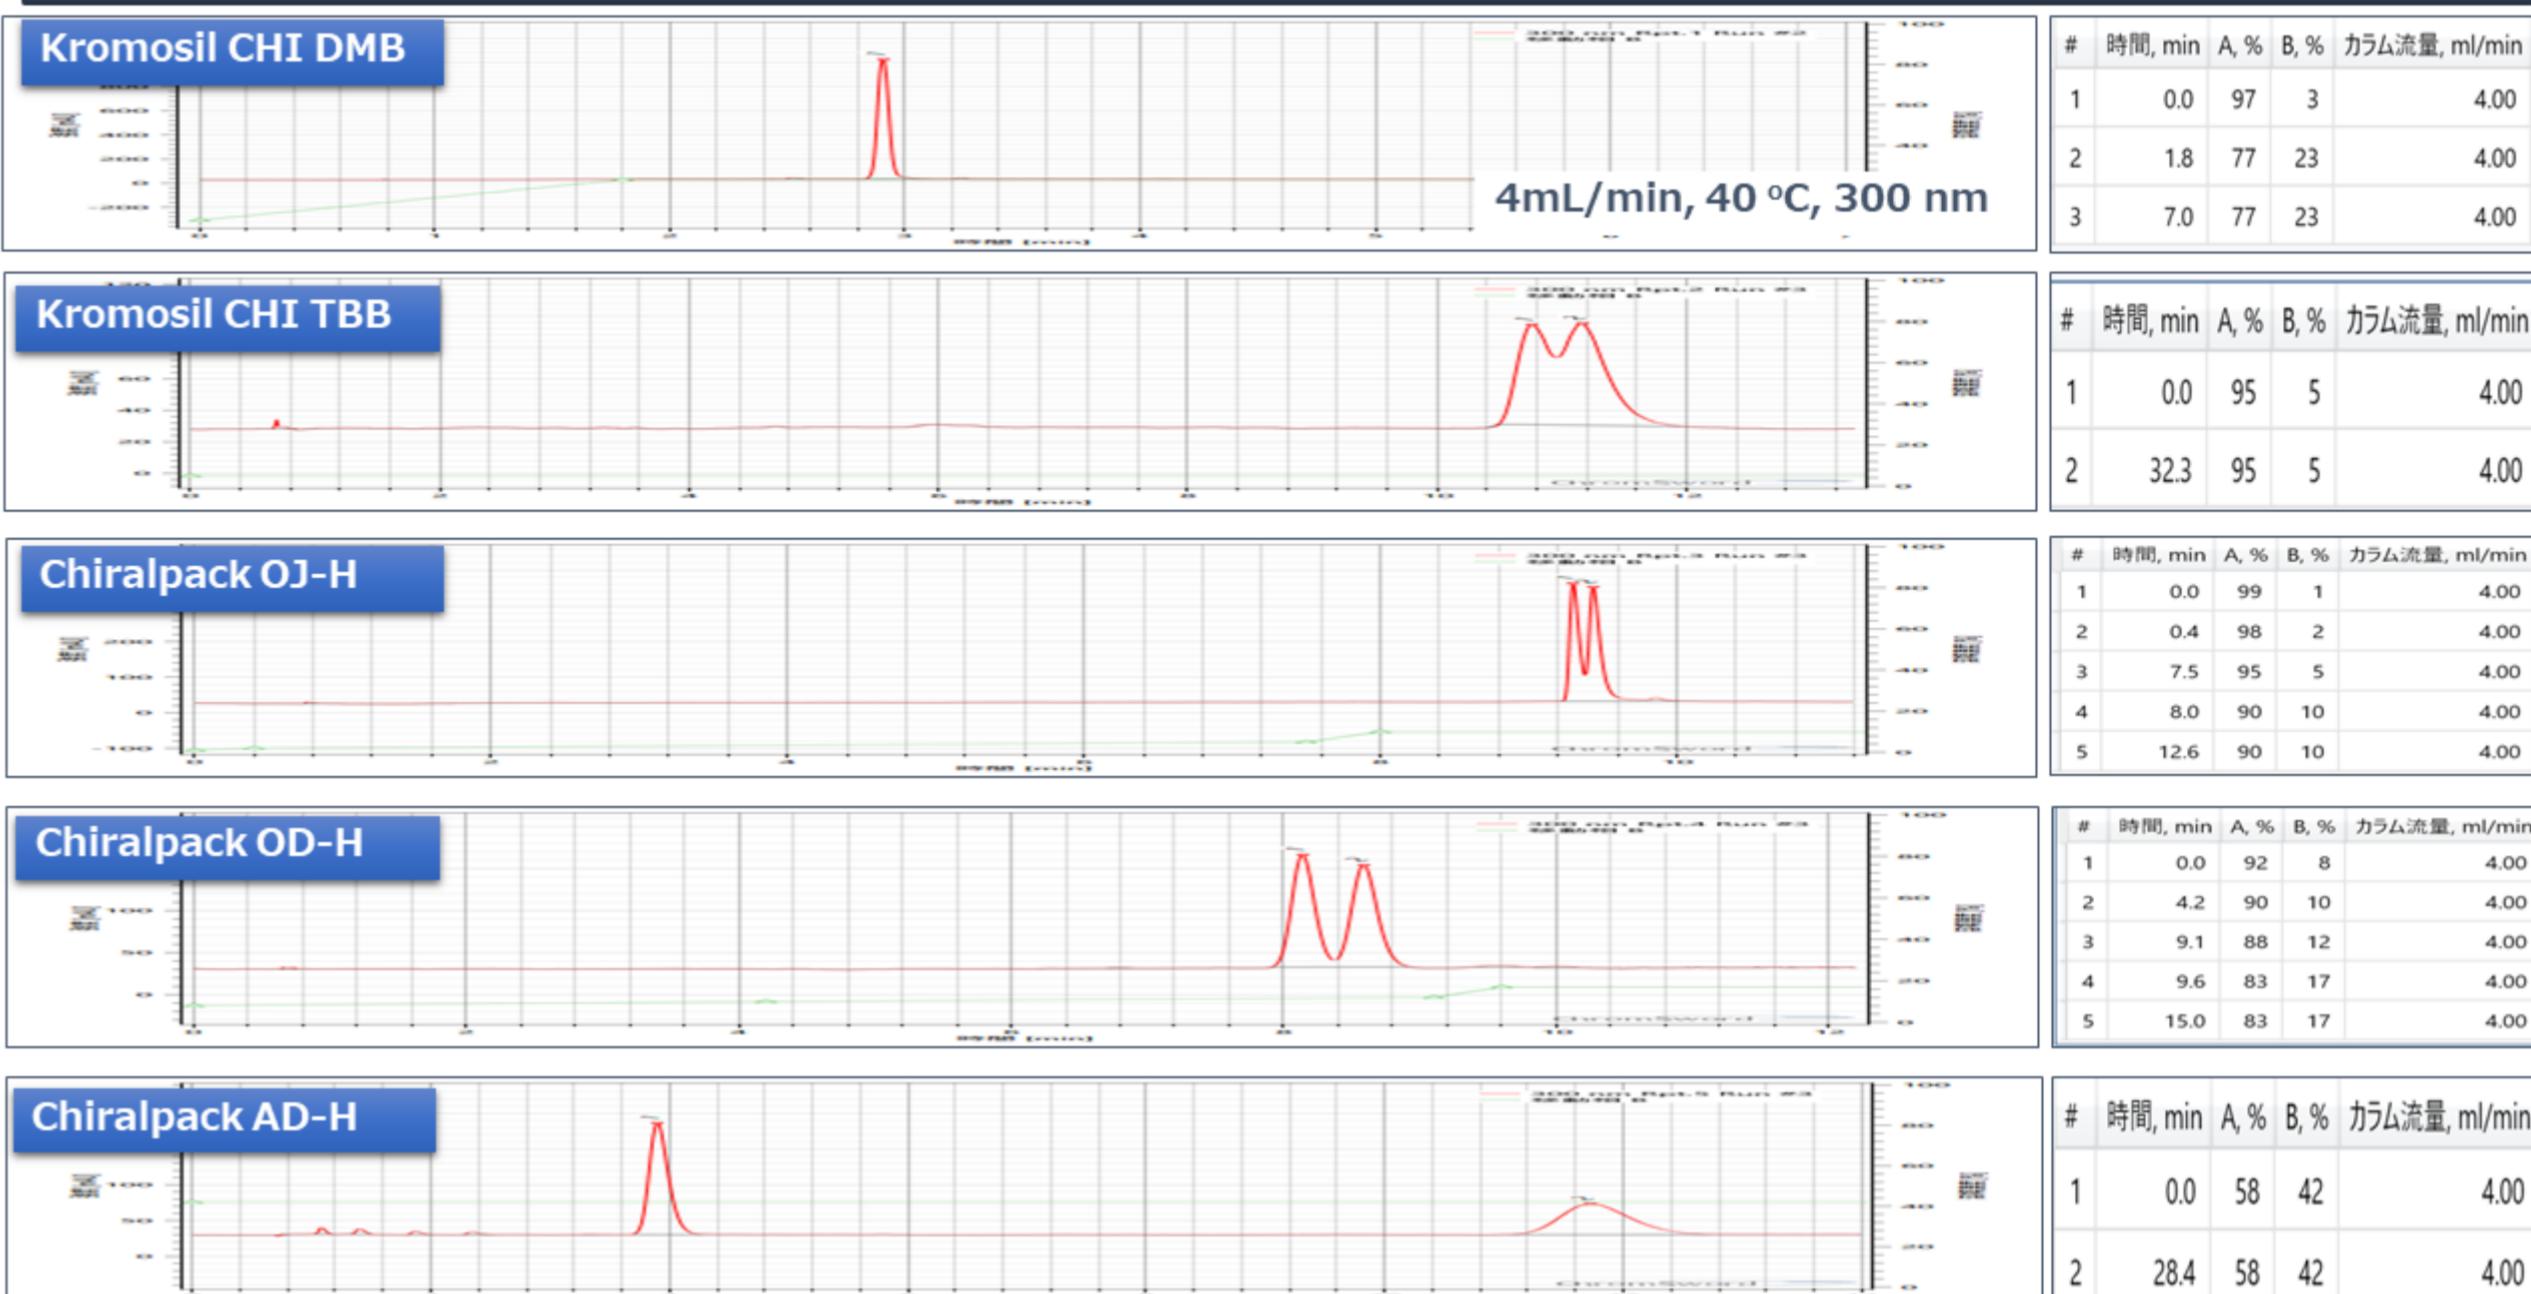

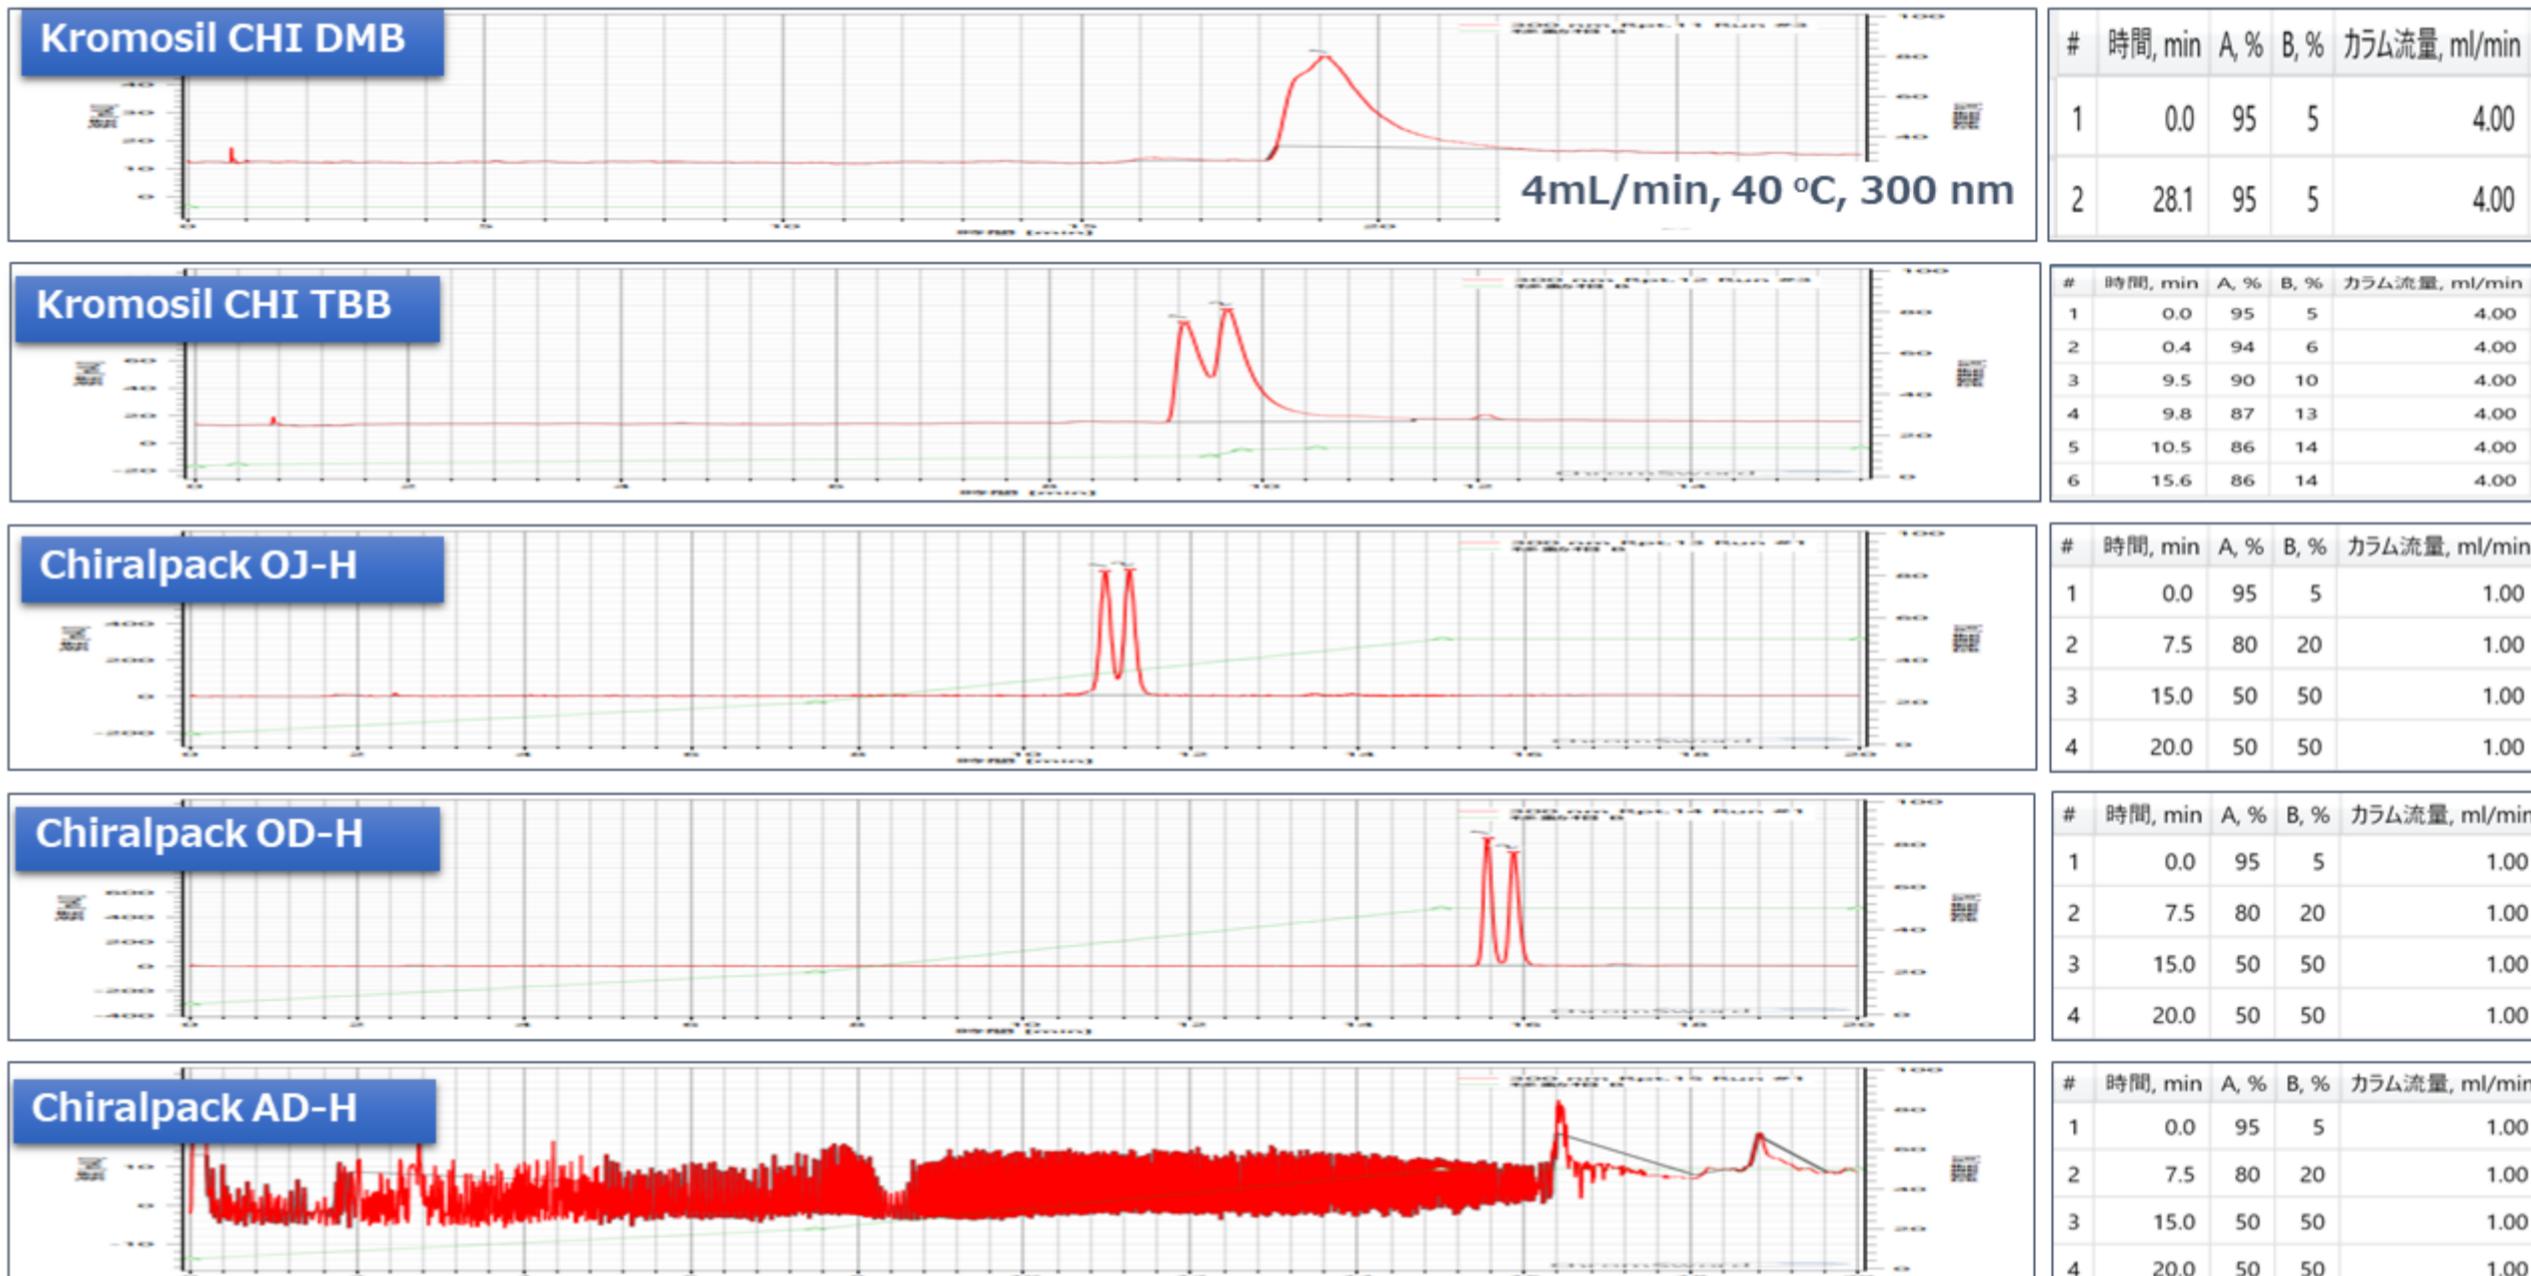

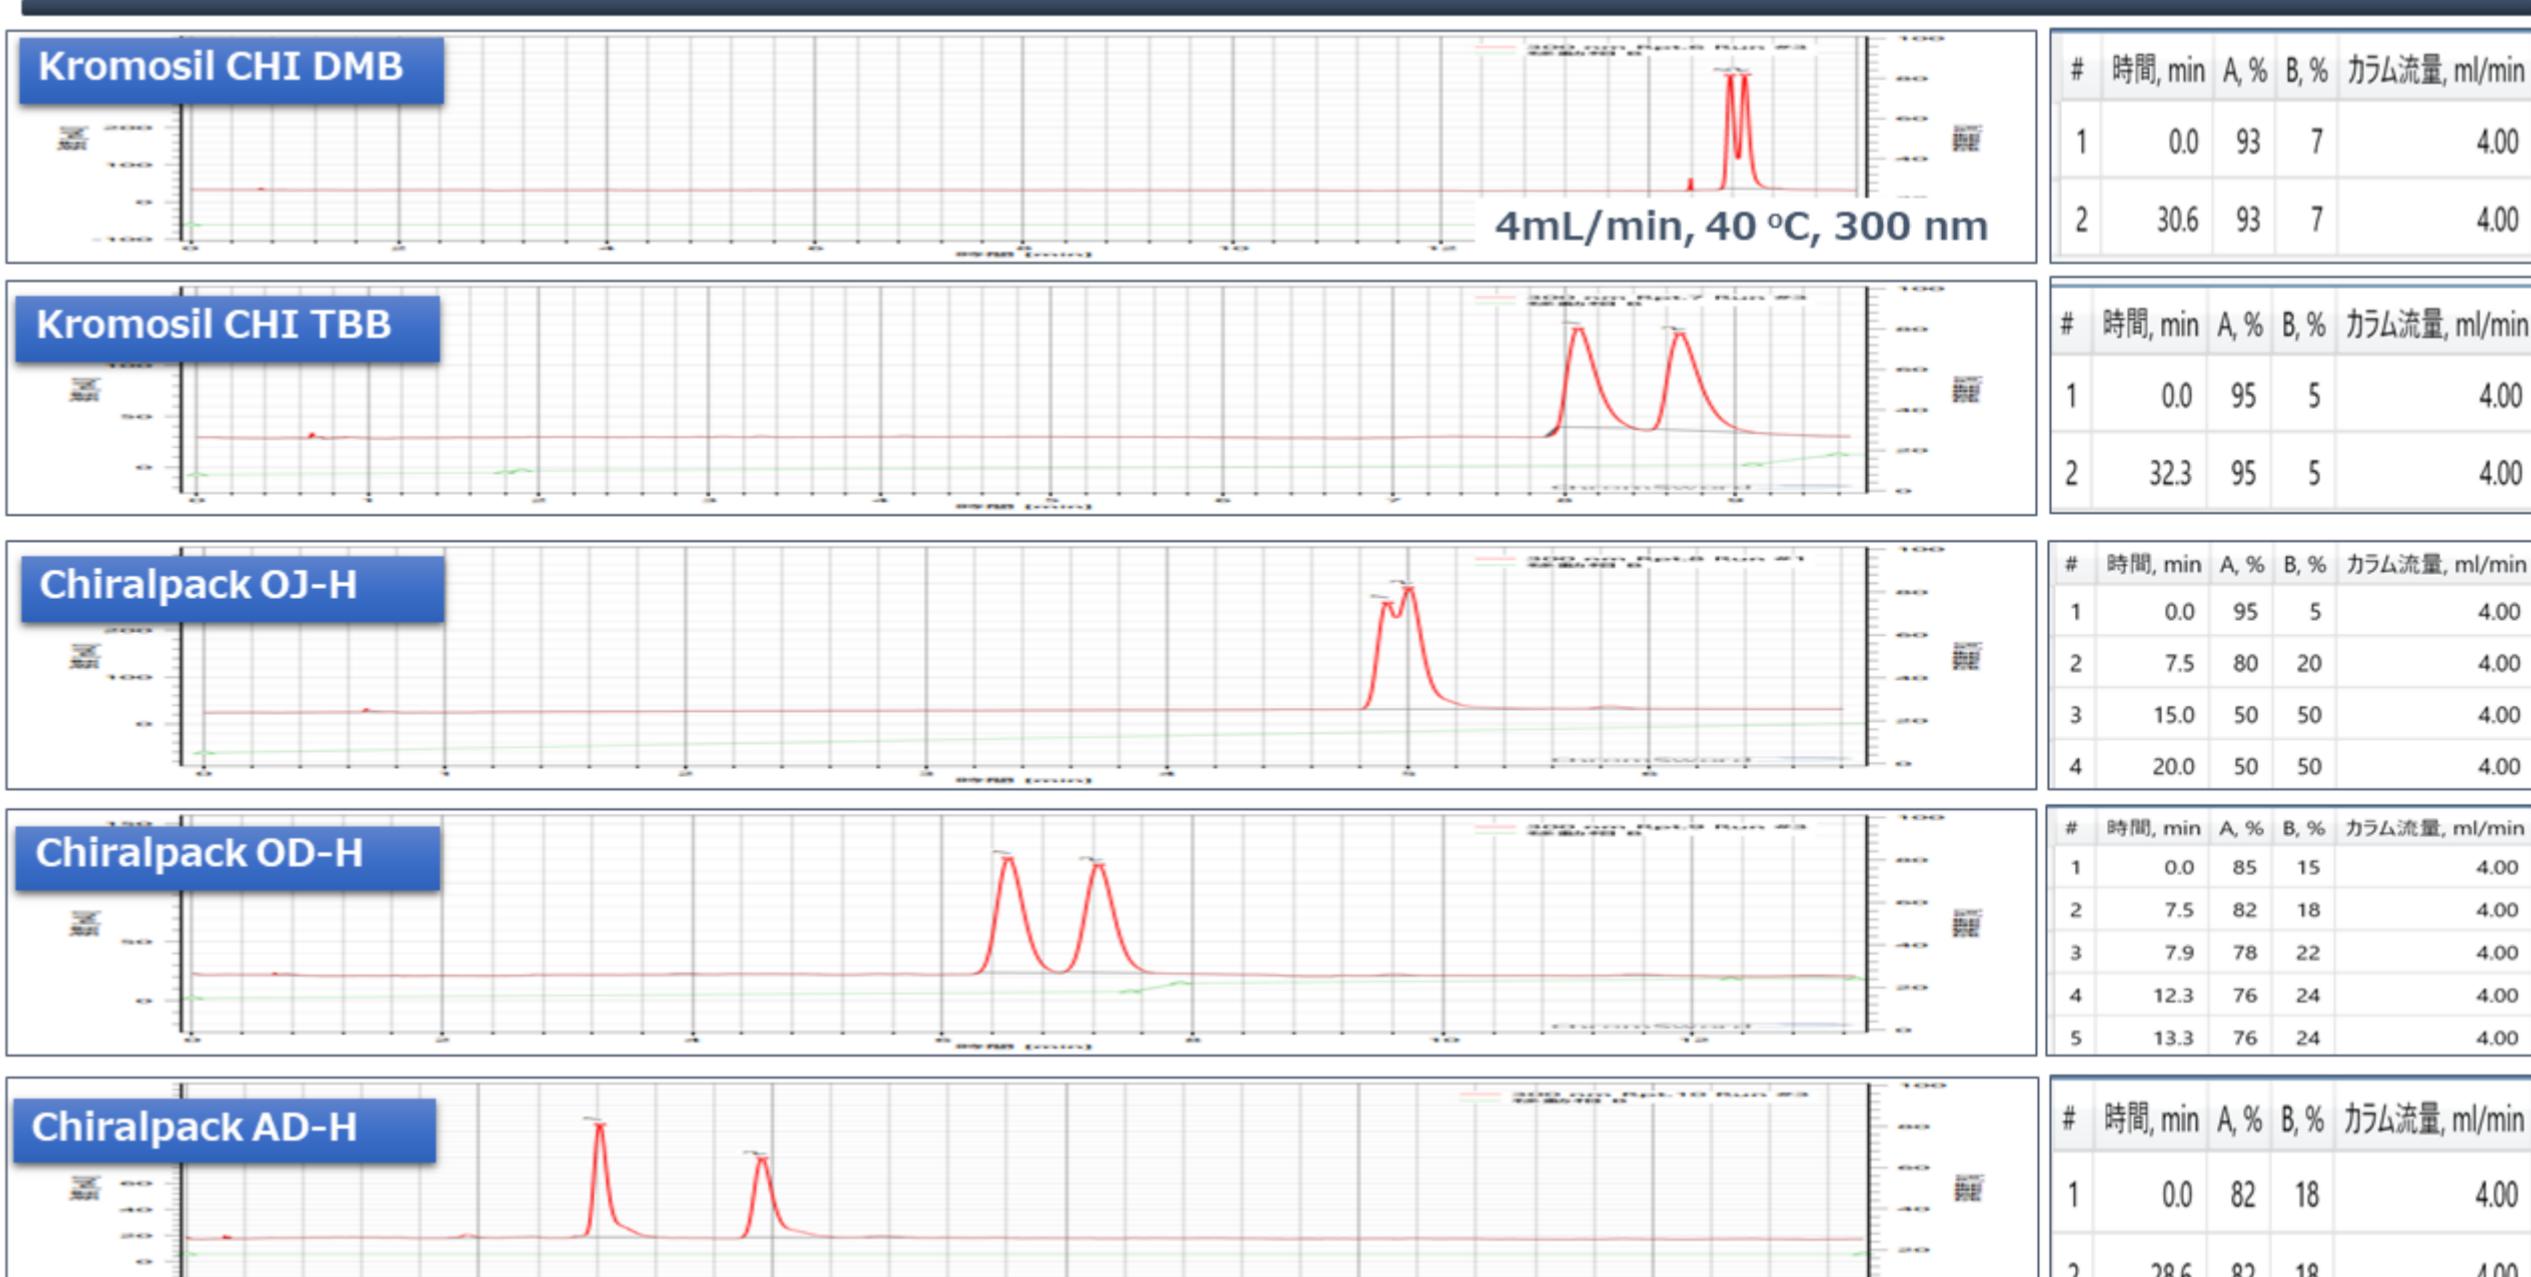

- SFC (Supercritical Fluid Chromatography) is recently focused on the one of more powerful instruments for various research and development processes in pharmaceutical, chemical, food, agricultural and environmental fields.
- Especially the SFC method development for analyzing and purifying chiral compounds is a critical step to increase productivity and to improve chemical quality as chiral compounds are highly demanded in the drug development.
- In this process, it is more tremendous need than HPLC to rapidly develop the chromatographic condition by SFC for chiral compounds to detect and analysis chemical impurities.
- The automated method development of chiral compounds using ChromSword Auto with SFC by own AI (Artificial Intelligence) algorithm oriented solvents and column screening is presented.

**Automated Development Process of ChromSword****Method****[Software]**

- ChromSword Auto >> Automated method development
- ReportViewer >> Data fast browsing, Analyzing and Design space
- OffLine simulation >> Manual Simulation for method optimizing

**[General Condition]**

- HPLC : Agilent 1260 series SFC/HPLC Hybrid system  
Column switching valve, Multi Wavelength Detector
- Column : 5 Chiral Columns (150 mm, 4.6 mm)
- Modifier : MeOH, EtOH and i-PrOH with 0.2% DEA

**[Samples]****Method screening flow of 5 columns and 3 modifiers****Rapid optimization of each column in 3-5 Runs(1h)****Rapid optimization of 5 columns with MeOH+0.2%DEA****Rapid optimization of 5 columns with EtOH+0.2%DEA****Rapid optimization of 5 columns with iPrOH+0.2%DEA****Further method optimization by OffLine simulation**
